Daksh Game BaaS — Master Extensive Roadmap Plan

10-Day AI Hyper-Sprint • Dual Payments (Razorpay + Paddle) • 90-Day Global Scale

MASTER BLUEPRINT

Directorate: Product & Engineering
Timeline: Day 1 to Day 90 | **Version:** 2.0

⚡ Executive Directives: AI-Native Execution & Zero-Dollar Launch

Daksh is delivered via a **3-Agent AI Workforce**: **Antigravity** (Lead Orchestrator & Shell Runner), **Claude** (Deep Systems & Cryptography Architect), and **Codex** (Unity C# SDK & Boilerplate Factory). Monetization uses a **Dual-Payment Engine**: **Razorpay** for domestic India (UPI, RuPay, e-mandates) and **Paddle** as Global Merchant of Record (MoR) to eliminate international tax liabilities.

1. THE 10-DAY AI HYPER-SPRINT BREAKDOWN (HOUR-BY-HOUR DELIVERABLES)

ZERO-TO-LAUNCH IN 10 DAYS

Day 1: Infra Core	Claude + Antigravity	Containerized Nakama + PostgreSQL + Redis Docker Compose, schema migrations & healthchecks.	✓ <250MB RAM footprint
Day 2: Local CLI	Codex + Antigravity	`npx daksh dev` CLI binary with auto-prerequisite check, auto-port binding & browser launch.	✓ Boots in <60 seconds
Day 3: Economy V2	Claude + Codex	TypeScript V8 Nakama runtime for atomic wallet deductions, catalogs, drop tables & idempotency.	✓ 0 Double-spend guarantee
Day 4: AI Cmd+K	Antigravity + Codex	Global `Cmd+K` palette in Studio, instant natural language economy recipes & event bus reload.	✓ Generates catalog in <2s
Day 5: Razorpay (IN)	Claude + Antigravity	Domestic India payments: UPI (GPay/PhonePe), RuPay cards, HMAC-SHA256 signature verifier webhook.	✓ 98% transaction success
Day 6: Paddle (Global)	Claude + Antigravity	International Merchant of Record (MoR), EU/UK VAT compliance, cards & PayPal, Studio switcher.	✓ Zero international tax audit risk
Day 7: Unity C# SDK	Codex + Antigravity	Standalone UPM package, `DakshClient.cs`, Device ID auth & persistent offline disk retry queue.	✓ Drag-and-drop in 10s
Day 8: Eject Button	Claude + Antigravity	1-Click Helm chart + standalone Docker Compose + Postgres schema dump export in a single zip bundle.	✓ Zero vendor lock-in
Day 9: Air-Gap Test	Antigravity (Solo)	Disable WiFi on laptop; verify full game loop: CLI start → Unity connect → Buy sword → Eject.	✓ 100% offline air-gap pass
Day 10: Public Launch	Director + All AIs	Public GitHub repository (MIT SDKs + FSL Core), Show HN post, Product Hunt & Discord community.	✓ 100+ GitHub Stars Target

2. DUAL PAYMENT ARCHITECTURE MECHANICS (DOMESTIC VS. INTERNATIONAL)

🇮🇳 Razorpay (India Core)

Methods: UPI (GPay, PhonePe, Paytm), RuPay, Netbanking, e-Mandate.
Pricing: ₹9,999/mo (Pro) | ₹29,999/mo (Studio).
Advantage: Eliminates RBI 2FA card failure rates.

🌍 Paddle (Global MoR)

Methods: Visa/MC/Amex, PayPal, Apple Pay, Wire.
Pricing: $149/mo (Pro) | $499/mo (Studio).
Advantage: Remits EU VAT, UK VAT & US sales tax automatically.

🔀 Geo-Routing Controller

Route: `/api/billing/create-checkout`.
Detection: Headers `cf-ipcountry` & `x-vercel-ip-country`.
Storage: Unified PostgreSQL subscription model.

3. PHASED SCALING HORIZON (DAYS 11 TO 90+)

PHASE	TIMEFRAME	STRATEGIC FOCUS & CORE TECHNICAL DELIVERABLES	PRIMARY KPI TARGET
Phase 1: Beta	Days 11–30	**Multiplayer Netcode & Matchmaking Suite:** • Turn-Based Engine (Async/Sync chess/cards with 0-DB state simulation). • Real-Time Relay Netcode (Client-authoritative UDP/WebSocket broadcast). • AccelByte Matchmaking Rulesets with dynamic latency rule flexing. • Matchmaking X-Ray Admin Portal for live queue visual inspection. • Unreal Engine 5 SDK (C++ & Blueprints) drop-in plugin.	50 Beta Studios 100+ GitHub Stars
Phase 2: Cloud	Days 31–90	**Daksh Managed Cloud & Global Super-Regions:** • 5 Global Super-Regions: NA-East, EU-Central, AP-South, AP-East, SA-East. • Anycast Edge network with sub-50ms ping routing worldwide. • Multi-tenant PostgreSQL partitioning with Ed25519 JWT verification. • ClickHouse OLAP Analytics Ingestion (DAU, ARPU, Retention curves). • Godot 4.x & WebGL official SDK packages.	$15,000 MRR 500 Live Games
Phase 3: AAA	Days 91–180+	**Enterprise Scale & Studio Franchises:** • Agones Dedicated Game Server (DGS) Kubernetes lifecycle manager. • Publisher vs. Game Hierarchical Namespaces (Shared identity across titles). • Monte Carlo AI Economy Balancing Simulator with automated inflation alerts. • Dedicated VPC Peering (AWS Direct Connect / GCP Partner Interconnect). • 99.99% Multi-AZ SLA with enterprise 24/7 dedicated support.	$50,000+ MRR Tier-1 Publishers

4. GO-TO-MARKET (GTM) & DEVELOPER GROWTH ENGINE

🚀 Viral Developer Loop
Zero-Friction Funnel: Developers install via `npx daksh dev` with 0 signup. They build locally for free, share video clips of AI catalog generation, and upgrade to paid cloud when their game goes live.

📦 Open Package Ecosystem
Storefront Distribution: Publish official packages on OpenUPM, Unity Asset Store, and Unreal Marketplace. Free SDKs act as zero-CAC customer acquisition vehicles.

🎮 Game Jam & Studio Sponsorships
Grassroots Evangelism: Partner with India Game Developer Conference (IGDC), Global Game Jam, and Ludum Dare with pre-configured multiplayer templates.

5. MASTER TARGET METRICS & MILESTONE DASHBOARD

PERFORMANCE INDICATOR	DAY 10 (MVP)	DAY 30 (BETA)	DAY 90 (CLOUD)	YEAR 1 (SCALE)
Active Games in Development	25 titles	150 titles	750 titles	3,000+ titles
Monthly Recurring Revenue (MRR)	$0 (Local Free)	$2,200	$18,500	$65,000+
GitHub Stars	100+	500+	2,500+	6,000+
CLI 0-to-Play Developer Latency	<3 minutes	<2 minutes	<90 seconds	<60 seconds
Global Edge Ping (90th Percentile)	Local (0ms)	Local (0ms)	<50ms (5 Regions)	<35ms (Anycast)
